

Confusion matrix for the CIFAR-10 dataset. The x-axis is 'Predicted label' and the y-axis is 'True label', both ranging from 0 to 20. The color scale on the right indicates the percentage of instances, ranging from 0.0 (light blue) to 1.0 (dark blue). The matrix shows high diagonal values, indicating good classification performance, with some off-diagonal values like 0.02, 0.36, 0.97, 0.03, 0.60, 0.99, 1.00, 0.33, 0.67, 1.00, and 1.00.
